Item: **Community Center – Public Safety Building Conceptual Design**

No. **5.5**

SUMMARY OF REQUESTED ACTION:

Following the presentation provided by the consulting firm BKV regarding the feasibility of a public safety building on the site of the current East End Recreation Center, staff is concerned that a central question has been left unanswered. The question is whether or not components of the proposed Community Center and the proposed Public Safety building can be accommodated on the East Recreation site, including the possibility of private property to the west. Staff is recommending that the City answer that question prior to formalizing a plan for public engagement.

Staff is recommending that the City hire BKV and ISG to provide a conceptual layout of the site including the proposed Community Center, the proposed Public Safety Building, green space, and parking. Due to the short timeframe and turn around time, an estimated cost will be presented at the Council Meeting, if not prior.

Based on the proposal received from BKV and ISG, the Council could direct staff to enter into an agreement with both consulting firms, allocate an up to amount for this specific design, and funding for this service would be recommend by staff to come from the 2022 budget contingency line item.

If Council concurs, a motion to authorize staff to enter into an agreement with BKV and ISG to provide a conceptual layout for the proposed Community Center and proposed Public Safety building, not to exceed the proposed amount provided and that the funding be allocated from the Contingency line item within the 2022 budget.
